NGUYEN, HAI V

ART UNIT PAPER NUMBER

2142

DATE MAILED: 04/20/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

# Office Action Summary

Application No.

10/039,125

Applicant(s)

PRAKASH ET AL.

Examiner

Hai V. Nguyen

Art Unit

2142

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 03 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 31 December 2001.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-23 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-23 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

## Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date 11/27/2002.
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_.

### DETAILED ACTION

1. This Office Action is in response to the application filed on 31 December 2001.
2. Claims 1-23 are presented for examination.

#### ***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
5. Claim 1 recites "**A server network architecture, the architecture** comprising:" in claim 1. "The architecture" is unclear whether it is software or hardware in a system or an apparatus.

#### ***Claim Objections***

6. Claim 22 is objected to because of the following informalities: Claim 22 recites, "a filter agent to **covert** between..". It should be "...to convert..."  
Appropriate correction is required.

***Claim Rejections - 35 USC § 102***

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this

Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

8. Claims 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by **Hu et al. U.S patent # 6,535,518 B1.**

9. As to claim 1, Hu discloses a plurality of cluster nodes connected via a SAN-based protocol (*Hu, various physical interfaces like multiple network interface or storage interfaces or multiple servers, col. 8, lines 8-17*); and at least one router node bridging the plurality of cluster nodes (*Hu, Fig. 8, items SAN 110 or SAN 121*) to a LAN (*Fig. 8, item 130*).

10. As to claim 2, Hu discloses, wherein the router node is connected to the LAN via a LAN-based protocol (*Fig. 1*).

11. As to claim 3, Hu discloses, wherein the LAN-based protocol is TCP/IP (*Fig. 1*).

Art Unit: 2142

12. As to claim 4, Hu discloses, wherein the router node is connected to the plurality of cluster nodes via a SAN-based protocol (*Fig. 1; col. 8, lines 8-17*);.

13. As to claim 5, Hu discloses, wherein the SAN-based protocol is INFINIBAND (*Fig. 1; col. 8, lines 8-17*).

### ***Claim Rejections - 35 USC § 103***

14. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

15. Claims 6-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Hu** as applied to claims 1-5 above, and further in view of **DeKoning** U.S patent #: **6,757,753 B1**.

16. As to claim 6 Hu does not explicitly disclose wherein a first router node and a second router node bridge the plurality of cluster nodes to the LAN. Thus, the artisan would have been motivated to look into the related networking arts for potential methods and apparatus for implementing a second node to bridge the plurality of cluster nodes to the LAN.

In the same field of endeavor, DeKoning, related Uniform Routing Of Storage Request Through Redundant Array Controllers, discloses (e.g. network resource backup) that *the RAID storage devices 134 may interact with other storage-related devices and systems, such as a backup system 156 and a remote data facility 158 which maintains a copy of the data from some or all of*

Art Unit: 2142

*the logical volumes 122 (DeKoning, col. 5, line 45 - col. 6, line 3; col. 7, lines 25-44).*

Accordingly, it would have been obvious to one of ordinary skill in the networking art at the time the invention was made to have incorporated DeKoning's teachings of a second system (DeKoning, Abstract, col. 5, line 45 - col. 6, line 3; col. 7, lines 25-44) with the teachings of Hu, for the *purpose of preventing the catastrophic failure of the data storage system and maintaining a mirror copy of the data (DeKoning, col. 5, line 45 - col. 6, line 3; col. 7, lines 25-44).*

17. As to claim 7, Hu-DeKoning discloses, wherein the second router node bridges to the plurality of cluster nodes after the first router node fails-over to the second router node (*DeKoning, col. 5, line 45 - col. 6, line 3; col. 7, lines 25-44).*

18. As to claim 8, Hu-DeKoning discloses, wherein the first and second router node bridges to the plurality of cluster nodes in parallel (*DeKoning, col. 5, line 45 - col. 6, line 3; col. 7, lines 25-44).*

19. As to claim 9, Hu-DeKoning discloses, wherein the router node comprises a session management agent for maintaining session information for sessions between the router node and a cluster node of the plurality of cluster nodes (*Hu, Figs. 8-10, the router keeps a routing table, switching status, and history and contain statistics, and controls the path traversed by the packets. The content in the routing table is provided by the server, based on storage controller (or SAN interface) and/or decoded packet information, cols. 7-8).*

Art Unit: 2142

20. As to claim 10, Hu-DeKoning discloses, wherein the router node comprises a policy management agent for maintaining connection information and routing policies for the plurality of cluster nodes (*Hu, Figs. 8-10, the router keeps a routing table, switching status, and history and contain statistics, and controls the path traversed by the packets. The content in the routing table is provided by the server, based on storage controller (or SAN interface) and/or decoded packet information, cols. 7-8).*

21. As to claim 11, Hu-DeKoning discloses, wherein the router node comprises a routing agent for maintaining connection information for the plurality of cluster nodes (*Hu, Figs. 8-10, the router keeps a routing table, switching status, and history and contain statistics, and controls the path traversed by the packets. The content in the routing table is provided by the server, based on storage controller (or SAN interface) and/or decoded packet information, cols. 7-8).*

22. As to claim 12, Hu-DeKoning discloses, wherein the router node comprises a filter agent for bi-directional conversion between the SAN based protocol and a LAN based protocol (*Hu, Figs. 8-10, the router keeps a routing table, switching status, and history and contain statistics, and controls the path traversed by the packets. The content in the routing table is provided by the server, based on storage controller (or SAN interface) and/or decoded packet information, cols. 7-8).*

Art Unit: 2142

23. As to claim 13, Hu-DeKoning discloses, wherein at least one cluster node comprises a management node for setting routing policies (*Hu, QoS requirements and measurements*) on the router node .

24. As to claim 14, Hu-DeKoning discloses, wherein the management node comprises a monitoring agent for obtaining statistics from the router node (*Hu, Figs. 8-10, the router keeps a routing table, switching status, and history and contain statistics, and controls the path traversed by the packets. The content in the routing table is provided by the server, based on storage controller (or SAN interface) and/or decoded packet information, cols. 7-8*).

25. As to claim 15, Hu-DeKoning discloses, wherein a cluster node of the plurality of cluster nodes comprises a session management agent for holding session information (*Hu, Figs. 8-10, the router keeps a routing table, switching status, and history and contain statistics, and controls the path traversed by the packets. The content in the routing table is provided by the server, based on storage controller (or SAN interface) and/or decoded packet information, cols. 7-8*).

26. As to claim 16, Hu-DeKoning discloses, wherein a cluster node comprises a policy management agent for maintaining routing policies for the plurality of cluster nodes (*Hu, QoS requirements and measurements*).

27. As to claim 17, Hu-DeKoning discloses a method of bridging a remote LAN client and a SAN cluster node, comprising the steps of:

receiving a LAN protocol communication from the remote LAN client (*Hu, Figs. 8- 9, Network interface 220 receiving incoming packets; cols. 7-8*);

transforming the LAN protocol communication into a SAN protocol communication (*DeKoning, Fig. 3, col. 8, lines 4-16; Hu, Figs. 8-9, Conversion 221 and Switching 201, Fig. 10, Switching 303, converting the incoming packet protocol into SAN Interface 250, col. 8, lines 1-17*); and

sending the SAN protocol communication to a SAN cluster node (*Hu, Figs. 8-9, then Conversion 221 and Switching 201, Fig. 10, Switching 303, sending the incoming packet to SAN Interface 250, cols. 7-8*).

28. As to claim 18, Hu-DeKoning discloses, further comprising the step of: establishing a connection between the remote LAN client and the SAN cluster node (*Hu, Fig. 5; the connection between client and host established*).

29. As to claim 19, Hu-DeKoning discloses, further comprising the step of: maintaining statistical information for the SAN cluster node (*Hu, Fig. 10; col. 7, lines 45-50*).

30. As to claim 20, Hu-DeKoning discloses a method of bridging a SAN cluster node and a remote LAN client, comprising the steps of:

receiving a SAN protocol communication from the SAN cluster node (*Figs. 8-10 Decoding/Control/Routing 205 receiving the SAN communication; cols. 7-8*);

transforming the SAN protocol communication into a LAN protocol communication (*DeKoning, Fig. 3, col. 8, lines 4-16; Hu, Figs. 8-10, 205 decoding/control/routing the communication protocol buffer 211 and through network interface 220; cols. 7-8*); and

Art Unit: 2142

sending the LAN protocol communication to the remote LAN client (*Figs. 8-10, 205 decoding/control/routing the communication protocol and sending to buffer 211 and through network interface 220; cols. 7-8*).

31. Claim 21 is similar limitation of claim 18; therefore, it is rejected under the same rationale as in claim 18.

32. As to claim 22, Hu-DeKoning discloses a router comprising: a session management agent to maintain session information for sessions with a plurality of cluster nodes over a LAN; a routing agent to maintain connection information for the plurality of cluster nodes connected via a SAN-based protocol (*Hu, Figs. 8-10, the router keeps a routing table, switching status, and history and contain statistics, and controls the path traversed by the packets. The content in the routing table is provided by the server, based on storage controller (or SAN interface) and/or decoded packet information, cols. 7-8*); and a filter agent to convert between the SAN-based protocol and a LAN-based protocol (*DeKoning, Fig. 3, col. 8, lines 4-16; Hu, Figs. 8-10, 205 decoding/control/routing the communication protocol buffer 211 and through network interface 220; cols. 7-8*).

33. As to claim 23, Hu-DeKoning discloses, further comprising: a policy management agent: to maintain routing policies (*Hu, QoS requirements and measurements*) for the plurality of cluster nodes.

34. Further references of interest are cited on Form PTO-892, which is an attachment to this action.
